

SPACE PLANNING TIPS

By Monika Sarkisian,
Principal, SGH Design Partners

As the lead designer for the Picton Mahoney project, Monika Sarkisian identifies other space planning suggestions.

- Integrate storage components below the worksurface to utilize every square inch of useable area. For the Picton Mahoney project this kept the panel height to a “seated privacy” level, while providing maximum use of the horizontal space below for storage. Some storage solutions within this linear set-up became shared or communal storage units.
- The ability to stack and add components is key in maintaining future “flexibility”. *Platform* is designed to allow overhead storage to be added at a later date simply by adding stack on frames and the storage to the existing frame.
